

How to install the brush set:

1. After downloading the file unzip it (if this is an archive).
2. Start Clip Studio Paint.
3. Right-click on any brush preset and choose Import subtool.
4. Choose one of Brush presets (\*.sut) from the folder with unzipped files. A new brush will be created.
5. Then you can add other 19 brushes. I named each of them for comfort usage.
6. Here we are! The basic settings are already made, but you can set your brushes as you wish.
7. Enjoy and create a great work! Thank you for the purchase!
